

Shipping, Stock-In & Dispatch Procedure

Container booking · stock-in · courier selection & dispatch

Document	SOP-WH-004 · Shipping, Stock-In & Dispatch
Version	2.0
Issued	16 June 2026
Owner	Operations / Logistics Manager
Incorporates	FK-OPS-SOP-001 (dispatch) · SOW-WH-004

1 Purpose & scope

This procedure covers the full role in three parts: **(A) container booking** (via the FK Home Logistics module), **(B) stock-in**, and **(C) dispatch**. Follow each part in order; each step assumes the previous was done correctly.

2 Who does what

Role	Responsibility
Coordinator	Office-based. Books containers, validates documents, raises POs, verifies counts, stocks in, selects couriers, creates labels, verifies dispatch. Never handles stock physically.
Warehouse (UK)	Unloads, counts, marks actual received, puts away, returns the delivery sheet, picks & packs orders.
Second coordinator	Independently re-checks each stock-in (location, quantity, plan number).
Manager	Receives escalations; authorises any stock adjustment or surcharge exception.

A Part A — Container booking & inbound logistics (FK Home Logistics module)

Container planning, supplier coordination, booking and shipping-document handling are performed in the **FK Home Logistics module**. Staff follow the module's flow:

- Track and prioritise incoming containers by arrival schedule and urgency.
- Coordinate with suppliers and book containers; chase and confirm BL, Invoice and Packing List; keep backups of key confirmations.
- Validate the documents (missing/null values, incorrect remarks); add Country of Origin and HS codes; ensure import/export compliance.

Note

- The detailed step-by-step and training for Part A will be added as the module's process is finalised. The start-of-day flow (opening Linnworks, opening a pick wave) is also still to be documented. Until then, follow the module.

B Part B — Stock-in procedure

1

Raise the Purchase Order — from the paid invoice

Build the PO in Linnworks from the **paid supplier invoice**: every SKU, quantity and **cost on each line**. Keep PO, Invoice and Packing List aligned. Not from the proforma or a chat message.

2

Issue the packing list

A day before the container lands, send the warehouse a packing list: barcode, item, **quantity in pieces**, boxes, cartons. A carton is not a piece (e.g. 12 cartons × 24 = 288). No price on this list.

3

Warehouse counts and marks the actual

The warehouse counts against the packing list, marks the **actual received** (full or short), and signs.

4

Verify the count, authorise put-away

Check the marked sheet (you cannot recount — you're remote). Record the **actual**, never assumed. If short, stock in the actual and **escalate the gap to the manager** — never edit a number to match the PO. Then authorise put-away.

5

Warehouse returns the delivery sheet

After put-away the warehouse returns a **delivery sheet**: barcode, location, quantity. Stock-in begins only once this exists.

6

Stock in to Linnworks

From the delivery sheet, **enter barcode, location and quantity** per line. Tick “**Deliver in purchase order**” on every line. If a price shows **£0**, key the cost from the invoice — never leave a zero.

7

Confirm the PO, escalate exceptions

Confirm the **whole PO is delivered**. Anything that won't reconcile — a short line, an unmatched barcode, a missing cost — goes to the **manager**.

8

Independent second check

A **second coordinator** (not you, not the warehouse) enters each barcode and confirms **location, quantity and plan / batch number**. A data check, not a recount.

Returns

Resellable returns run the **identical stock-in flow** — raise a PO, stock in, produce a delivery sheet, file it for audit **tagged as a return**, keeping the warehouse's original list.

Monthly stock count

Pull the Linnworks report, **sort it location-wise**, send it to the warehouse to count. Reconcile, list every difference (+/-), and **escalate to the manager**. Never self-adjust stock.

Stock-in non-negotiables

- PO from the paid invoice; record actual, never assumed.
- Cartons are not pieces — always check pieces.
- Tick “Deliver in purchase order”; a £0 price is keyed from the invoice.
- Stock in from the delivery sheet, not the packing list.
- Never self-adjust stock — escalate discrepancies for sign-off.

C Part C — Dispatch (courier selection, labelling & verification)

C1 · The two formulas

Same three measurements (length × width × height, cm), different divider. Use one per courier: **Volume = L × W × H ÷ 1000** (litres) for Amazon Prime, Yodel*, Evri. **Dimensional = L × W × H ÷ 5000** for DHL and DX. (*Yodel is verified by CBM using the approved calculator.)

C2 · Courier selection

Courier	Measure	Key limits	Split rule
Amazon Prime	Volume ÷1000	Auto-assigned; under 40 L	Over 40 L → separate labels
Yodel	CBM (calculator)	17 kg · 90 cm · 0.113 m ³	CBM over 0.113 → separate
Evri (Hermes)	Volume ÷1000	15 kg · 120 cm · 40 L	Over 40 L → separate
DHL (Next Day)	Dimensional ÷5000	Result under 25	Over 25 → separate
DX Standard	Dimensional ÷5000	25 kg · 150 cm; result under 25	Over 25 → separate
DX Overnight	—	Treadmill, walking pad, heavy gym; no size/weight limit	Use when over DX Standard

Combine only when all conditions are met at once — total volume / CBM, weight and dimensions all within the courier's limits. **Special size:** trampoline, rack and rocking chair must stay under 90 cm for Yodel; over that, do not use Yodel.

C3 · EVA mat quantity caps (per parcel)

Product	Yodel	Evri	DHL
EVA 2.5	8 pcs	4 or 8 pcs	3 sets
EVA 30×30	—	80 pcs	—
EVA 60×60	16 pcs	12 pcs	7 sets (28 pcs)
EVA 12MM	16 pcs	12 pcs	—
Carton EVA mats	16 pcs	12 pcs	—

C4 · Common label errors & fixes

Courier	Issue	Fix
Amazon Prime	Not eligible for Amazon Shipping	Switch to Evri, Yodel or DHL by size & weight; regenerate label.
Yodel	Email address missing	Add info@fksports.co.uk; regenerate label.
Yodel	Address / email too long	Shorten the address (remove wording, use standard abbreviations); regenerate.
Evri	Next Day unavailable for postcode	Change service to Hermes Tracked; regenerate label.
DHL	Label fails on parcel size	Recalculate ÷5000; if over 25, split into separate parcels with individual labels.

C5 · End-of-day verification

Pick waves: **Mixed pick wave 14:30, final Amazon pick wave 15:00.** Then sweep every platform — **Amazon, eBay, Shopify, Temu, OnBuy** — and confirm:

- No orders left unprocessed on any platform; no same-day dispatch order still pending.
- Every order is on the correct pick wave and all labels generated; any straggler is processed immediately.

C6 · Additional shipping charges

1 Find the surcharge

Check the delivery postcode, identify the courier (DHL or DX), open the relevant surcharge sheet, and find the postcode's surcharge.

2 Work out the charge

Calculate the total additional charge — it must cover the surcharge **and** keep the required profit margin.

3 Approve & collect before dispatch

Contact the customer, give full details, and get **written approval**. **Receive payment before dispatching**. Never dispatch a surcharged order until it's approved and paid.

Final dispatch checklist (before release)

- Correct courier selected; weight and length within limits; volume / CBM calculated correctly.
- Product combinations verified against courier rules; all labels generated; all errors resolved.
- All platforms checked after the final pick waves; no same-day order remaining.
- Additional charges confirmed and paid where applicable; customer informed where required — then release for collection.

D Definitions

Term	What it means
Bill of Lading (BL)	Carrier's shipping document; container details and pricing are cross-checked against it.
Purchase Order (PO)	Linnworks record of what we paid the supplier for — our claim of what is owed.
Packing list / Delivery sheet	Sent to the warehouse to check against / returned after put-away with real locations.
Country of Origin / HS code	Customs data added to invoice and packing list for compliance.
Volume vs dimensional	÷1000 gives litres (Prime/Yodel/Evri); ÷5000 gives the DHL/DX figure.
Pick wave	A batch of orders released together for picking (14:30 mixed, 15:00 final Amazon).

E Document control

SOP-WH-004, v2.0, issued 16 June 2026. Owner: Operations / Logistics Manager. Companion: SOW-WH-004. Part A is operated through the FK Home Logistics module (detailed procedure & training to follow). Part C incorporates FK-OPS-SOP-001. Training: FK Home Academy.
