

Shipping, Stock & Dispatch Coordinator

Container booking · goods-in & stock control · order dispatch

Document	SOW-WH-004 · Shipping, Stock & Dispatch Coordinator
Version	2.0
Issued	16 June 2026
Owner	Operations / Logistics Manager
Covers	Container booking, stock-in & dispatch (one role)

1 Purpose of the role

This is a single coordinator role spanning the whole goods journey: **booking containers in, receiving and stocking goods**, and **dispatching customer orders out**. The same person handles all three. The role makes sure the right stock, at the right cost, is recorded accurately, and that every order leaves on the right courier at the right price — with any error surfaced, not absorbed.

2 Where the role sits

Office-based coordination across two systems: the **FK Home Logistics module** (container planning, supplier coordination, booking, documents) and **Linnworks** (Purchase Orders, stock-in, inventory, courier labels). The **warehouse team (UK)** does all physical work. A **second coordinator** independently re-checks each stock-in. Issues escalate to the **manager**.

The principle the whole role hangs off

- Inbound: we receive exactly what we paid for — the PO is our claim, every check proves it or exposes the gap.
- Outbound: every order leaves on a courier that fits, at a price that protects the margin, with nothing left behind.

3 Core responsibilities

A · Container booking & inbound logistics

- Track and prioritise incoming containers by arrival schedule; verify container details and pricing against the Bill of Lading.
- Manage and validate shipping documents (BL, Invoice, Packing List); add Country of Origin and HS codes; ensure import/export compliance.
- Coordinate suppliers and book containers, chasing and confirming documents — run through the FK Home Logistics module.

B · Stock-in & stock control

- Raise the Purchase Order from the paid invoice; issue the warehouse packing list; verify the count and authorise put-away.
- Stock in to Linnworks (barcode, location, quantity; “Deliver in purchase order”; cost; plan number); confirm the PO; pass an independent second check.
- Process returns through the same controlled flow; run the monthly stock count, reconcile and report.

C · Order dispatch

- Select the right courier (Amazon Prime, Yodel, Evri, DHL, DX) and create the label, using the volume / dimensional formulas and each courier's limits.
- Identify and fix common label errors; apply combine / split rules correctly.
- Run the end-of-day verification (pick waves and platform sweep); calculate and collect any additional shipping charge before dispatch.

4 Tools & systems

- **FK Home Logistics module** — container planning, supplier coordination, booking, documents.
- **Linnworks** — Purchase Orders, stock-in, inventory, courier selection and labels.
- **Supplier invoices, BL & Packing List** — the source documents for cost, customs and receiving.
- **Courier surcharge sheets** — DHL / DX remote-postcode lookups.

5 Standards the role is measured on

- **Accuracy & compliance:** documents, POs and the Linnworks record match what was paid for and what arrived; Country of Origin and HS codes correct.
- **Actual, not assumed:** stock figures are never edited to make a PO reconcile.
- **Right courier, right cost:** the parcel fits the courier; surcharges are charged and paid before dispatch.
- **Control & escalation:** "Deliver in purchase order" on every line, no £0 costs, independent second check; discrepancies are escalated, never self-adjusted; nothing left unprocessed at end of day.

6 In scope / out of scope

In scope	Out of scope
Container booking, document & compliance handling, POs, stock-in, returns, monthly count, courier selection & labelling, end-of-day verification, surcharges, reporting.	Physical handling of stock — unloading, counting, moving, putting away (warehouse team). Adjusting stock figures without manager sign-off.

7 Reporting line

Reports to the **Operations / Logistics Manager**. Works alongside the warehouse team (UK) and a second coordinator. The full working method is in the companion **SOP-WH-004 — Shipping, Stock-In & Dispatch Procedure**; the container-booking stage is operated within the FK Home Logistics module.
